

[Remarks:](#) See §4.5, page 130 till 144

[Hints:](#)

Draw the constructions at paper with squares

[Answers:](#)

In cases (a), (b) and (c) is the way of support not effective: the bars intersect in one single point, around which the block can rotate. The blocks are kinematically indeterminate supported.

Only block (d) is kinematically determinate supported.
